Dear Mr. Munson:

Attached is a map of the Nephi Gypsum Quarry, M/023/011, Juab County, Utah. Marked in red and blue on the map are structures, roads, stockpiles, quarry area and crushing area. Below I have addressed several of these areas intended uses.

- Lower road and pad areas will be recontoured, scarified and seeded at conclusion of mining.
- Berms along the creek will remain intact during mining and after reclamation.
- Fine gypsum stockpiles will be marketed and removed. Any material remaining after mining will be spread, contoured and seeded during final reclamation.
- East road by old fine stockpile area will be left for future access to the dam.
- Gypsum storage building will remain and used for other purposes.
- Waterbars will be placed approximately every 50 feet on upper quarry road.
- Dominate vegetation to be used for reclamation will be intermediate wheatgrass, smoothbrome grass, rabbitbrush, yellow clover and fourwing saltbrush.

I hope this helps provide the information needed. Once you have a chance to review this map, please let me know if we need to get together and discuss this mine further.

Sincerely,

NEPHI SANDSTONE CORP.
